

A COLLECTION OF NON-CHRONOLOGICAL
REPORTS WRITTEN BY YEAR SIX PUPILS

SPYTECH ARCHIVES YEAR 6 RESEARCH DIVISION

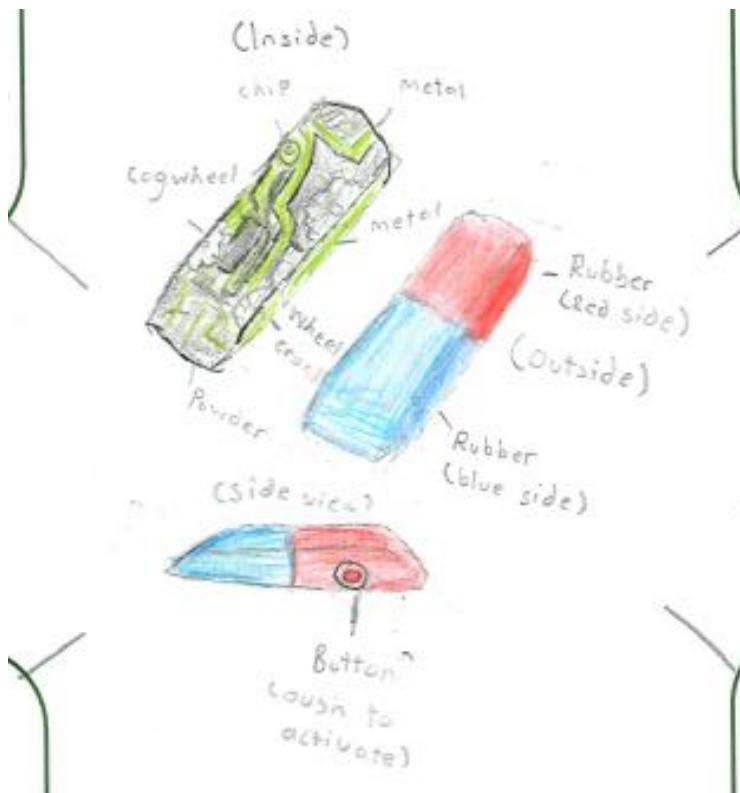

Stationary set: Beware of these gadgets!

Introduction

The amount of crime in the recent years has increased dramatically and requires professional experience and tools --- In America, New York City, the M18 operative EK has developed new gadgets that look exactly like normal everyday items. They are only for the secretive service agents with skill and aim, yet you will never know if they are a spy or not, these agents look completely like regular citizens with regular items, and you will be surprised when you realise that these are gadgets... The benefit of these gadgets can help in a mission, there are 5 tools: a highlighter, rubber, ruler, glue stick and a mechanical pen, beware if you see them anywhere, no one can be trusted so be discreet wherever you go. The purpose of this report is to inform everyone about these items, this is a sign, a portent of danger!

Mechanical Pen – Needle6000 – Led: “Dart launcher”

With just a simple twist to the cap, the agent can change the led to a tranquilizer dart launcher, this feature can put enemies to sleep for approximately 20-30 minutes once

hit. These darts are roughly 2.5cm long and are coloured red and white.

Rubber compartment: Sleep powered micro darts

The next amazing feature is the rubber compartment, blink 3 times in a row into the eyeball scanner, this part of the Needle6000 holds two micro darts for over 40 minutes. This gives the agents an opportunity to complete their covert mission; the operatives can also use these darts on animals if they are chasing them (like guard dogs, wolfs, bulls, bears... etc!

Click clip: Laser and light

Click the clip on the side of the pen 3 times to activate the last feature, this part is a laser point that doubles as a UV light, the UV light reveals hidden messages and fingerprints, this feature of the Needle6000 is beneficial as the agent can use it to track down someone or find out what someone is hiding, while the laser point can burn

through metal, this is also useful since the spies can burn through vents, doors, drawers or walls made from metal to escape or unlock places with locks.

Highlighter Pen – Flash50 – Cap: Flashbang

Just with a simple press to the cap, agents can automatically activate the first feature, this triggers a 5 second flashbang, it takes 10 seconds to start the flash as they must throw it and run to give them enough time to escape from the area and blinding flash.

Ink: Thermite gel

The next part must be activated by using the ink on your hand 3 times, the ink will melt, and the inner part will show thermite gel that can spread on locks made of any material to weaken them.

Glue stick – Slick101 – Glue: Rock-hard polymer

Twist the bottom to deploy fast-curing polymer that becomes rock-hard in seconds – useful for sealing doors, drawers or locks back together. If put on someone's hand and is not washed off within a minute, it would burn through your skin and can either leave bruises or can tear skin.

Rubber – Breaker Bar 2.0 – Ruling: Cut through stuff

Use it on an agent's hand by ruling it twice (no pencil needed), this can cut through any glass (like windows) and then metal (like vents), it can also slice through wood and layers of skin...

Rubber – RiskyRubberX0 – Rubber: Electric shock activated wires

All the agents need to do is rub the rubber on the wall or floor and toss it somewhere. This can make anyone

EK

Magical Make-up Set X4L

In a covert world of espionage, completing missions requires more than training; it demands advanced spy technology. A new gadget developed by Professor Imaani. B at the MI6 Innovation Centre, Los Angeles, America includes cutting-edge features that can manage paramount missions and surveillance on certain criminals. The M. UX4L (Make-upX4L) is aimed for agents who are soon completing secret operations or capturing criminals. The structure of this device is designed to appear as an everyday object whilst containing tools for a dangerous mission.

Laser Wire

By clicking the pink heart button twice; the agent can enable an invisible laser wire. This amazing feature allows operatives to easily capture a criminal by making them fall with just a push of the button!

Transformable Laser Gun

To activate this laser gun, twist then pull the bottom of the lip gloss 90° clockwise and a mini laser gun will form in the agent's hand as they pull it out. This high-tech transformable laser gun helps defend spies against their enemies whilst also remaining undetected to finish a covert and paramount mission.

Optimal Voice-Recorder

With a flip of a switch, secret operatives can instantly activate the optimal voice recorder and send signals of help and back-up to the MI6 Headquarters. If the agent has been captured or is missing, this advanced feature will sense danger and automatically send signals of help and to MI6. The optimal voice recorder can hear conversations from at least 20 feet away and through walls that are 10cm thick. This high-tech feature allows agents to know their cunning criminals' next move.

In conclusion, the Make-UpX4L is an optimal tool for any spy agent as it hides a secret voice recorder, transformable laser gun and a tripping laser wire. This spectacular design allows agents to finish a covert mission whilst remaining undetected. The M. UX4L is disguised as an everyday object to avoid suspicion whilst containing tools for supporting operatives.

Glossary

Espionage- spying on other countries or people.

Innovation- 1) Inventing or using new things 2) Something new that you have just invented or started using.

Surveillance- Watching or monitoring people, places and things.

on Begum

Make-up X4L

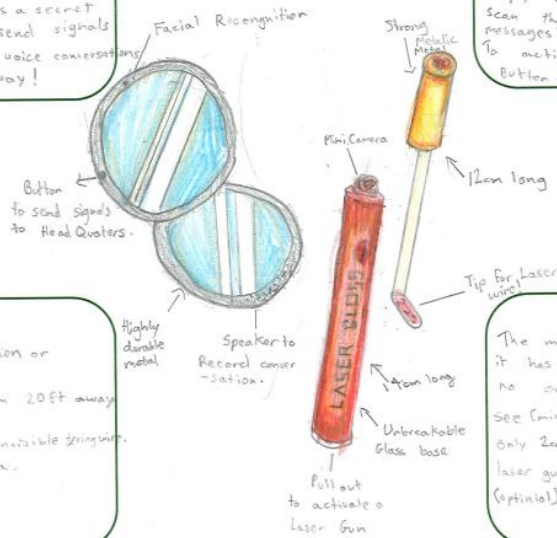

Purpose:
The make-up X4L (M.U.X4L) comes with a laser lipglass which helps agents catch criminals. This laser also acts as an invisible tripping wire.

The mirror in M.U.X4L is a secret device which can send signals to HQ and record voice conversations from at least 20ft away!

Key Features

Facial recognition or print
Record conversations from 20ft away
Send signals to HQ
Lipglass: Acts as an invisible tripping wire, built in laser gun

Materials used:

Metal: Glass Protective case for the mirror

Glass: Outer base for the laser lipglass

How to use it:

Simply open the mirror to let it scan the agents face and open the messages! (From HQ)
To activate the lipglass push the button on the lid for 3sec to activate

Why its so awesome!

The make up X4L is awesome because it has a mini camera that no ordinary human eye can see (mirror) and the lipglass is only 2cm thick but has a built in hidden laser gun with LED lights for vibes (optional).

IB

The Intelligent L.G

In the world of espionage, many agents go undercover because of this cureless world since there is lots of crime and murder. The L.G, an advanced gadget, has been developed by the undercover agent's technologies in Paris, France. These intelligence L.G's are made for undetected spies. The L.G looks like a pair of normal glasses but really, it's not. This report provides, L.G special features and how to use it during secret missions.

The L.G Face Recognition

By using the voice command, the L.G will turn on the face recognition mode, and the face recognition allows the agents to have all the information for their targets. This will help during dangerous missions as this device can be paramount covert operations. This device will allow the user to blend in any part of the world.

The Zoom Feature

The zoom, one of the most paramount features that will help the agents on every mission as the zoom feature will be activated if the agents squint their eyes. It will let the agent zoom into their target and capture the enemy. This tool will help the agent stay safe and become successful. With this gadget no mission is impossible! In addition to this, another range of features such as:

- . It can go up to 500X
- . It has auto zoom which allows the agent to see faraway without doing anything

The Message Display

The message display will turn on if the user presses the button on the right corner. It shows the secret messages directly in the agent's vision. The message display will allow the agents to see what their target are messaging and planning with their team. This will help the agent to find out what their target is going to do. It has many features such as:

- . It will alert the agents by a beep
- . The message comes quick as it can
- . Only the user can hear the beep noise not anyone else near the user

In conclusion, the L.G is the perfect gadget for special forces. It includes amazing features such as face recognition, zoom feature and the message display. This clever design means the agents can use all the features to get information of their targets, how they look and what they are planning.

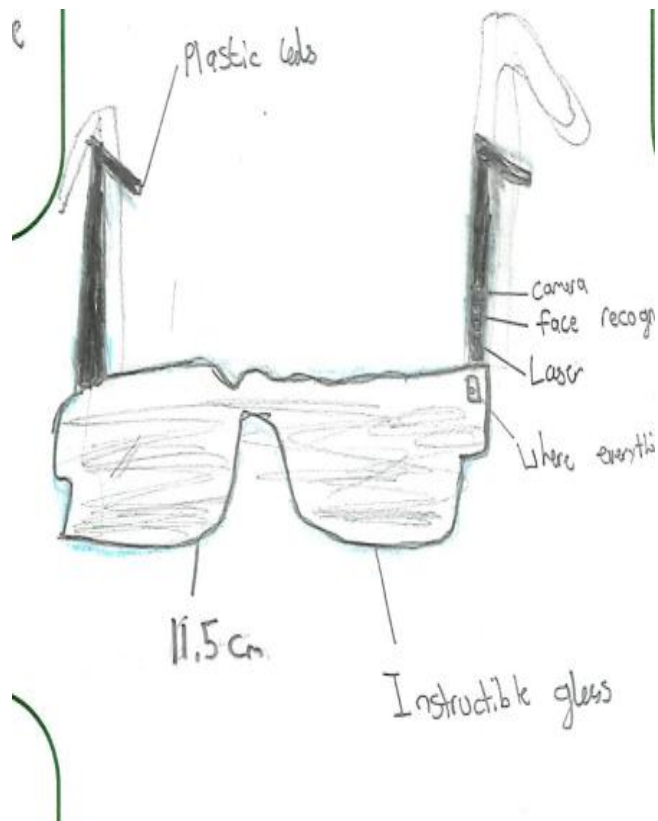

Glossary:

Espionage – spying on other countries or people

Paramount -it's important or must happen

Intelligence – smart

Surveillance – to check or watch something to gather information

AH

The H.A.M.P Pen

Introduction

In a world of espionage, the amount of crime has increased by 73% in 2025; that's why it's with paramount importance to have a new gadget involved. The H.A.M.P Pen (Highly Advanced Multi- coloured Pen)! It was an innovative, creation that was engineered by the one and only Dr Jubanga in New Mexico, North America. The Hamp pen is designed to decrease almost all criminal activities. It was also created for the MI7 to use during covert missions. One of the main appearance benefits is that this pen looks like an ordinary teacher's pen-although it most certainly is not -.

Unrecognizable recorder:

By pressing down a red button, the extraordinary pen will automatically activate the recording device. This unique pen is designed to record secret messages or information. It will also translate the message to English if it is in a foreign language. This recording device can be used when agents are in covert missions when secrecy and discretion are required. It can sense when somebody is approaching towards the operative so, it will instantly turn off.

Genius GPS Tracer

After pushing down a green button on the side of the pen, all the agents progress such as where the agent is, what they are doing and who there with, will be stored. In addition to that, all the data will be stored in the MI7s records where all the agents can view when the operative is on the field. When the data is transmitted, the MI7 will be able to track, find or even send backup.

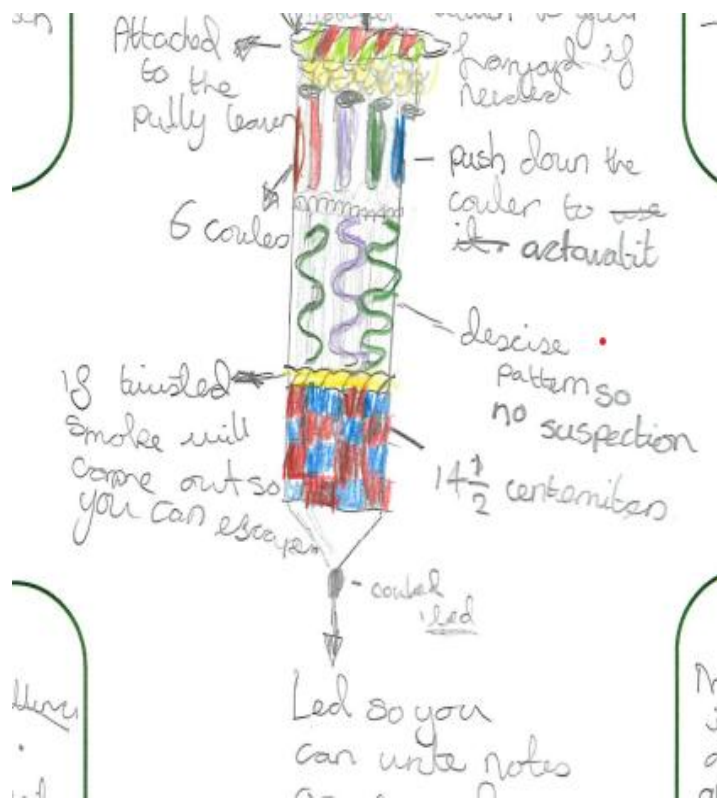

Dart Demolisher

At the lower side of the pen tip, there is a small circular to twist and when twisted, a dart will be released from the mouth of the pen towards the agent's opponent. It is also functioned to give self-defence at any times and at any place in paramount missions. Each time you twist, a dart shoots right out to the agent's opponent.

Conclusion

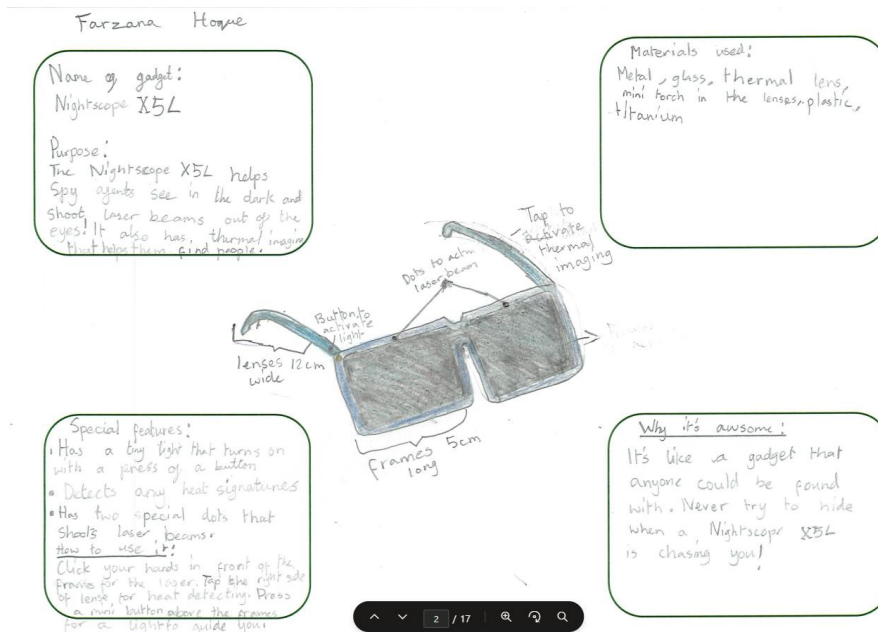

In conclusion, the Hamp pen benefits all agents and is the perfect tool for covert missions. Even though it looks ordinary, it has a: GPS tracker, recording device and a dart machine. This clever device can benefit towards self-defence, evidence, and data its unrecognisable design makes it blend in and unsuspectable.

LB

The best gadget ever: Super Sunglasses

Due to the fact that surveillance cameras and security are getting destroyed, this world needs more training and skills ; including a new cutting-edge gadget that stops all crimes from taking place. Invented by Professor Mariah in the lab of Global Espionage Research Institute (G.E.R.I) in Tokyo, Japan , the Nightscope X5L is intended to be used by international spy agents during covert , secretive missions that are life-threatening. This catalogue describes the features, activation methods and the benefit of this gadget.

Laser beams

With just three clicks of your fingers, the agent can instantly activate the laser beams. This feature can help spy agents break out of high-security, metal doors, especially when they are caught and locked in an unescapable room. It is mostly used to gain access to secret doors when discovering a room, like an office that has been locked up for many years. This feature is paramount as it will help keep agents safe during an undercover operation.

Heat seek

By pressing a button on the right side, the spy can immediately activate heat vision. This amazing feature allows the operative to find their enemy by detecting their body heat. This can help agents complete their discreet mission through the press of a button!

Bright light

To activate this feature, the spy must tap a button – disguised as a yellow charm – and a mini light will turn on right next to the frames of the sunglasses. This would guide the

agent in the dark as it can brighten up the room. It will allow them to search for the criminal even at night!

In summary, the Nightscope X5L is the perfect gadget for any agent around the world. It looks like an ordinary, everyday pair of sunglasses, but it hides a mini light and includes heat vision and laser beams. This clever design helps spies capture criminals and complete their missions without suspecting a thing!

Glossary

Surveillance – Watching or monitoring people, places or objects

Paramount – Something very important

Discreet – Something is so quiet, it's undetected

Covert – When something is a secret or secretive

FH

THE SWORD OF THE FUTURE

Introduction

In a hazardous world of treachery and espionage; agents of wisdom have remained one step ahead - but due to the immense amount of deceased victims – it requires optimal, cutting edge technology. Developed by a group of talented engineers in Italy at the Global M17 Research Centre (GMRC). The YingYangs Greatsword is relentlessly recommended for spies and agents to use – as it provides a range of vital tools special forces need for an undetected mission, such as: defence, intelligence and so on. It has been cautiously designed as an everyday object- a simple, ordinary ballpoint pen. Which was architected by Ingenious I.H. The YYGS (YingYangs Greatsword) contains covert controls and terrific tools. This catalogue will highlight the functionality and superficial benefits for the possible operator.

The ink of wonders

By clicking the back of the pen, (exactly once) – the user can enable the fool-proof invisible writing ink, which allows secretive conversations; to see the translucent writing, a special UV flashlight s needed to fully see the ink. This mind blowing feature allows the user to contact other special forces in plain sight. Such a feature is crucial in such conditions, where surreptitious actions are mandatory.

Legendary laser of intrigue

To activate the next sophisticated feature – click the top of the pen twice, which enables the laser beam. Agents can now use this resourceful laser cutter. This extraordinary laser can decimate through almost everything! Its double strapped carbon fibre base is what makes the laser strong and valiant. This feature is a must for such paramount operations.

The revolutionary torch of brightness

Now, to activate the final feature – click the top of the pen three times. Spies can now equip a miniature and compact torch – however, do not be fooled as this torch has extremely high saturation and illumination. This torch can be used for dark and ominous places – or creating a distraction, blinding the adversary’s eyes. This feature is a must for such paramount operations

Conclusion

In conclusion, the YYGS (YingYangs Greatsword) is an impeccable and exquisite tool for any agent. It looks innocent – but it is far more than just a pen. It is equipped with such magnificent wonders – from invisible writing ink to being equipped with a laser tip and a torch. This resilient design helps special forces to stay in control without raising suspicion. Isn’t this a lifesaver?

Glossary

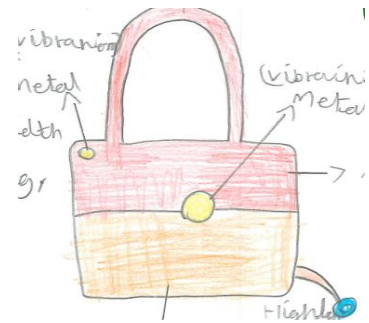

WORD :	MEANING :
Magnitude	The size of something (mass), the weight
Optimal	Best or most favourable; optimum
Adversary	An enemy - nemesis
Paramount	Of great importance – supreme and crucial
Compact	closely and neatly packed together; dense:
Illumination	Light, lightning , brightness or exposure
Hazardous	Dangerous – of great peril and hazard
Treachery	The act of betrayal- to betray someone
Surreptitious	Secretive, in secret- the act of covert
Espionage	The practice of spying or of using spies
Mandatory	When something is important- of great importance.

IH

Sticky situations

Introduction

Developed by a team of engineers and scientists in Japan, Tokyo, at the Global Covert Research Centre, or G.C.R.C. for short, the famous DR Malik developed the Bubble Gum Dispatcher (AKA B.G.D.) – the leader. This device is designed for elite field agents who work at high-risk environments and this device is disguised as an every-day-object and it can help escape sticky situations as the purpose is to help agents in the field. This report will give information on the materials, features, activation methods and the use of the gadget.

Criminal detector

With the touch of a finger, this feature traces the DNA of whoever's holding it so it can detect if it is a criminal or not. If it is not in the owner's hands, then it explodes! Turning into a super dangerous, very sticky, venomous, green ooze. The benefit is to halt criminals from high - tech gadgets as discretion is paramount.

Disguise-o-Matic

As agents press the button in the corner, they can change their identity. If spotted, spies can change their disguises to anyone. The only limit is their imagination. The benefit of this gadget is to change identities when criminals detect operatives, so the covert spy's real identity is never revealed as the alias/disguises are perfect for agents in the field.

Shooter

The activation method is to pull the cord. It can shoot bubble gum to the agents (as you can see, that's why the name is shooter). The benefit is that if operatives are in a rush, it can do the job for them, quicker than any human being in the world. As this innovation is new, it can be used all over the Earth by elite and beginner agents.

Conclusion

To sum up, the Bubble Gum Dispatcher is more than just a handbag. It includes a detector criminal and disguise – o – Matic, allowing agents to stay safe during missions. Its disguise makes it impossible to believe it is not an every – day – object, as its disguise shall never be revealed.

Glossary

Disguise = When you dress up as something you are not.

Mission = An important job someone is sent to do.

Paramount = Something that is very important and must happen.

Discretion = Being careful in what you say or do.

Alias = Having a fake name.

Operatives = Another way of saying.

KK

HOOK KNIFE XO -The magnificent pen-

Introduction

The numbers of murders has increased by a lot in New York city, America. CIAR (covert, independence, architecture, research) has developed a gadget, Hook knife xo made by other agents and the one who had the idea, LH. This gadget is more ideal for special forces/ operatives so they can have more support and benefits. The design has been carefully chosen to appear as an ordinary pen which was easily designed by LH. The purpose is to inform people in the area about these gadgets and the functions and benefits.

Hook knife Xo-The revolutionary transportation-

Just by clicking the button on the left of the pen the operatives can activate the grapple hook. It can grapple Agents up to 20m if agents hold on tight enough. This can help agents escape if ever in danger and since the agent is in the air there's a high chance no one will catch up to them as it has a hard grip so they will be going fast

The knowledgeable knife of the future

With just a simple click, agents can easily activate the second feature; which is the knife. It can through anything – even metal and wood. This knife is even indestructible, and one mistake can cut off an operative's hand! In addition, if ever stuck somewhere the agent can just cut through it (but take earbuds as the noise will hurt special forces ears.) This can help agents a lot to move in different places e.g a vent as it's cooperative and adaptable. A underground room that's undetectable and no one knows about.

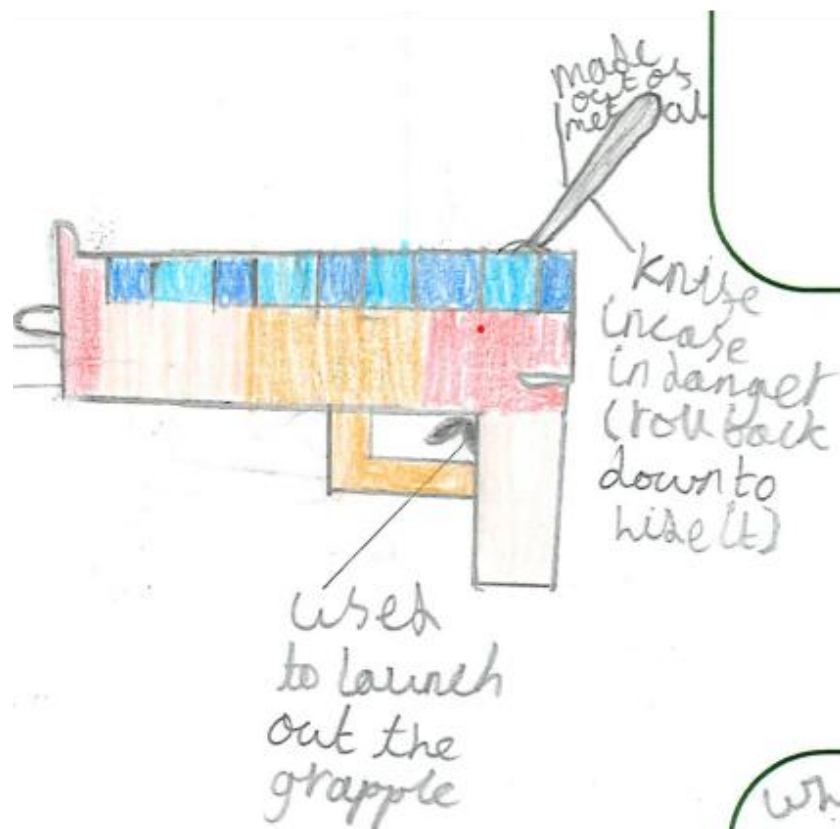

The optimal cutting edge smoke bomb

Lastly, twist the cap tree times to activate the final feature which is the smoke bomb. This one of a kind feature is impeccable for agents to disappear from where they were. Some of the smoke bomb's are filled with glitter (stings really bad) and they will shine into people's eyes for about 10-15 seconds. This amazing feature helps agents way more and get away faster.

Conclusion

In conclusion, the hook knife xo pen is the best gadget for any agent. It may look like a simple pen but inside of it has a grapple hook, knife and a smoke bomb. This clever design helps agents to take notes and catch criminals easily since it looks like a normal everyday object agents will be able to do it without anyone noticing.

Word	meaning
adaptable	Able to be modified for a new use of purpose
cooperative	Willing to be of assistance Involving a mutual assistance in working towards a common goal
optimal	Best or most favourable; optimum

LH

Crucial Codebreaker 2.0

Due to crimes increasing in the world; there is a serious need for high-tech gadgets. This optimal, high-tech gadget was produced by Dr Zoya from the M16 headquarters of Geneva, Switzerland. This cutting-edge technology is created for international agents sent on dangerous, life-threatening operations. This report will explain all about this gadget and its amazing, life-changing features.

The smoke emitter

By pressing the grey button, facial recognition will activate and scan the agents face. Instantly, the smoke emitter will turn on, it will give the agent approximately ten minutes to escape. The smoke contains deadly gases and is very venomous for whoever gets hit as they will be unconscious (for thirty minutes up to four hours). This creates a distraction for the agent. This feature is paramount for agents attending solo covert missions.

Deactivator

By the flick of the pink button, this gadget can hack into any surveillance system, codes, lasers and disable their activation. This device has an advanced hacking software system and transmits the suspicious data to M16 headquarter to investigate. The gadget supports the operative in the event of an emergency as it can save them from danger. This device leaves no trace of the agent, which keeps the spy's identity undetectable.

Intelligent tracker

By double tapping the screen, the intelligent tracker will be activated. Agents can track anyone simply by typing their name! Immediately the data and location as well as criminal record will show. This revolutionary gadget is for agents catching criminals and transferring them to prison.

In conclusion, the Codebreaker 2.0 is a must for agents. This gadget has a smoke emitter, deactivator and intelligent tracker. This allows the to stay safe and be discreet during paramount operations. The gadget may look like an everyday object, but this gadget is more than an ordinary; it's the key to a complete mission.

Glossary

Discreet-being careful what you say and do, especially when you have a secret to keep.

Paramount-something very important and must happen.

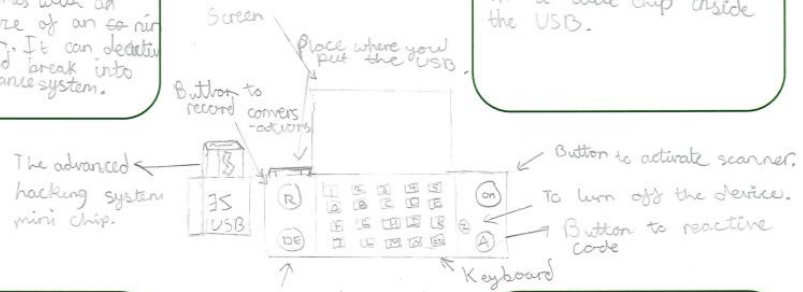

Surveillance-watching or monitoring people or places to gather information.

Covert- something secret or hidden.

Manual GA
A11

Name of gadget:
Code breaker 2.0
Purpose:
This USB comes with an tablet the size of an air-teno switch. It can detect and break into any surveillance system.

Materials used:
Water and bulletproof USB and screen. Has the most advanced hacking system on a little chip inside the USB.

Special features
• Has different games to make it more ~~undisguisable~~ undetectable.
• Has face ID and if it fails it will record.
How to use it
Press the red button on the left handside. It will then ask for an face ID and turn on.

Why it's awesome:
It is an essential tool for digital espionage. It can retrieve or plant important data during covert operations.

MA

The IV Night Glasses 900

Introduction

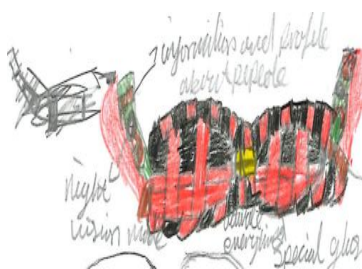

In a world full of threatened national security, staying two steps ahead of targets or enemies needs more than practise; it demands unpredictable software. Developed by Dr. Marwa Hasnat at the International Espionage Centre (IEC) constructed in Berlin, Germany. These specialised gadgets are paramount, and they are for professionals such as Intelligence agents. The IV Night Glasses 900 has been carefully designed to appear undetected and not noticeable gadget, while containing hidden tools and impressive surveillance. This report explores functionality, strategic value in supporting covert operations, stakeouts and diplomatic missions.

Thermal Imaging

To enable the thermal imaging feature, it will have to scan your face and check your ID. The agents will see thermal imaging, and it will spot the target or enemy. The agent can track down the targets easily without any binoculars. Such a feature invaluable during paramount operations or covert stakeouts, where discretion is paramount.

Facial Recognition

To activate the facial recognition mode agents will have to press a button with a touchpad password to enable the mode. This feature will help agents in covert missions. It can detect similar face and detect enemies easily. It can also view distant targets and view their profile. The agents

MH

The amazing Radar Wristwatch 67

Introduction

In the world of espionage, crime happening left and right, criminal rates have increased by 67 percent. The Radar Wristwatch 67 solves everything possible, as it was engineered by the famous MA team [Mission Advance] in London, England. This gadget is used for operations and special forces. The Radar Wristwatch 67 looks and feels like an ordinary watch-but in reality it's not. This report will showcase and describe how this tool functions.

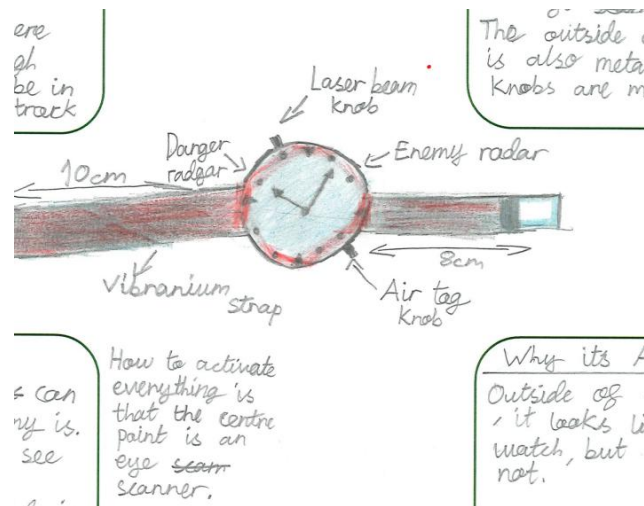

The Slicer

Activating one of the most paramount feature in the Radar Wristwatch 67 is simple. Twist and pull the miniature knob and the ultimate laser cutter appears. This laser can cut, chop and slice in just a matter of milliseconds. The agents can be operative discreetly, blend in and be undetected anywhere in the world. This could be an important piece of covert missions, endangered operations and anything to keep the percentage of criminal activity down.

The Radar hand

Along with the laser, another key element of the Radar Wristwatch 67 and how to activate it is incredibly secretive that no enemy can identify it. By the centre point scanning the agent's eyes, this will open up the Radar hand. The Radar hand looks identical to a minute hand on an ordinary watch. No one will detect this master piece as it can track instant danger without looking suspio. By pulling out the second knob [again] and twisting it 90 degrees anti-clockwise ; this will activate the most miniature, tiny, subtle GPS ever created. It is smaller than a crimson ant, a baby thumb and anything enemies can think of. In addition to this, it comes with another range of features such as:

- .It can connect to the Radar hand.
- .It is made from a magnetic type of foam.
- .The material is completely different to the watch.

Conclusion

To summarise this innovative gadget, the Radar Wristwatch 67, is the perfect tool for any special forces. The slicer, radar hand and the GPS all blend in incredibly; at all times to support agents on covert operations. The Radar Wristwatch 67 looks and feels like an ordinary, everyday item, which is a perfect example of having many features; without raising suspicion.

Glossary

Paramount- important or valid in a situation.

Discretion-act quiet or secretive.

Surveillance- to check or watch on something to gather information

Covert-secretive or secret.

MR

The Espionage Goggles

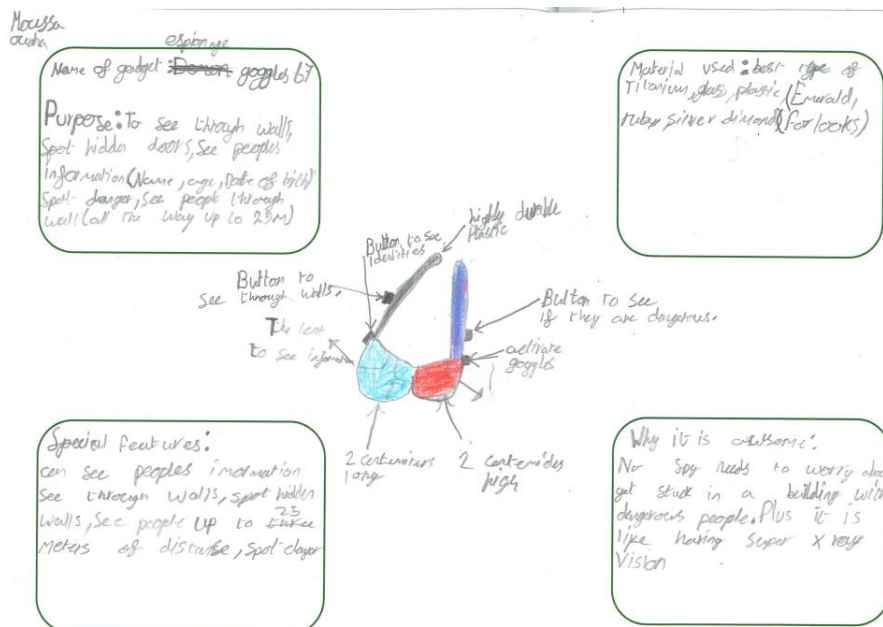

In the world of espionage, a range of futuristic, non-imaginable gadgets have been invented by the MI6 headquarters for the world's safety. This is because the world's crime rate has increased by 67% by the end of 2025. In an underground laboratory professor Moussa Ouaha has invented a special gadget: The Espionage Goggles. This gadget has been engineered for agents who are going under hazardous missions. It looks like a normal pair of goggles, but its powers are beyond imagination. This report contains information about the gadget and why it has been constructed.

Danger Detector

The Espionage Goggles has many unique features: one of them is to detect danger. These will activate by pressing a button which will detect agents DNA and checks if it is the right user. Once activated it scans the area and will turn red if the person is dangerous or if carrying a weapon and green if they are normal, safe people. This can help agents when they are in crowded places.

X-Ray vision

As well as detecting danger, the Espionage goggles can also see through walls up to 25 meters. It is activated by blinking three times. It can see through walls made of brick, metal and titanium. It is like having X-Ray vision. This helps agents in paramount missions and attacking at the right time.

The Scanner

The best feature of the Espionage Goggles is The Scanner. This is activated by pressing a button on the left-hand side. It can see people's information and can see when people

age falsificate during talks with the police and when they go alias. This helps agents retrieve information back to the MI6 headquarters.

In conclusion, The Espionage Goggles is the most paramount gadget for agents.it looks normal but The Scanner, Danger Detector and X-Ray vision have benefits beyond imagination. This device assists agents in shutting down dangerous plans and capturing criminals.

MO

REVOLUTIONARY GADGETS

Introduction

Over 1.5 percent of the world have gone through incidents to do with crime. This is why a range of revolutionary gadgets have been made by professor Ahmed Khalil at the covert technology division in Tokyo (Japan) . The gadget Eye Glass is the most common gadget and it is intended for use by international intelligence agents from the MK6. This report provides detailed information about how the gadgets are activated .

Blinding beam

With a flick of a switch, agents can activate the Eye Glass most dangerous mode ever (laser beam mode). This can help agents in dangerous diplomatic missions where secrecy and discretion is paramount. This feature can cut through five metre thick walls while it illuminates the room and blinds the enemy so the agents can escape easily during dangerous missions .

Encrypted messages

By tapping a small device in your ear agents can activate a feature that can allow covert communications between agents. This can benefit agents by sending undetected and encrypted messages if there severely hurt or in danger. This feature does not only make the agents mission easier its quicker to function as well.

Scope of doom

By squinting twice agents can activate a feature that can zoom in a fifty metre range allowing them to see objects in the distance without binoculars. This feature can help operatives identify objects clearly and suspected while being undetected

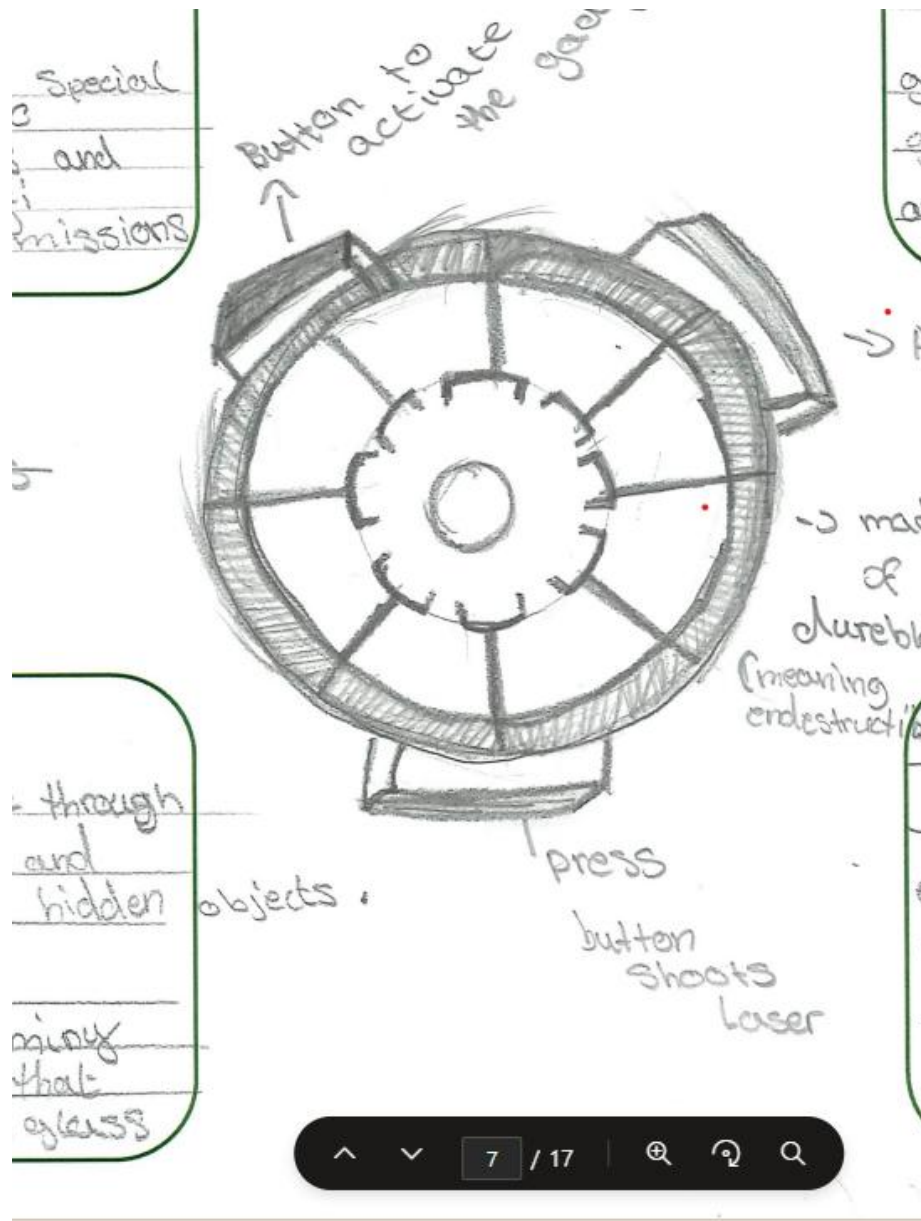

Conclusion

To conclude , the Eye Glass is a perfect gadget for a covert diplomatic missions . This gadget is more than just a ordinary contact Lense it activate a feature called blind beam mode when you activate it your enemy's get blinded . Its stylish design makes it impossible to suspect its true purpose .

Glossary

Espionage: This word means when someone is spying on people or other countries .

Paramount: meaning something important and must happen.

MN

The Serpents Pen: The Ultimate Pen

In a world of espionage, skills and training isn't enough for your survival. According to some sources, the number of criminal activities has gradually increased to 79% by the end of 2025. As this is a danger for the world, an unknown citizen, whose identity has been anonymous due to safety reasons, has carefully engineered an advanced piece of technology, created in Reykjavik, Iceland, in the MI6 Research Centre, to help humanity gain its ground. This gadget is mainly for agents who needs an undetectable device that will help them on their missions. The design of this gadget helps deceive others into thinking it's a normal everyday object, however it's not. This beneficial gadget supports the agent when they want to remain undetected. This report will provide information on activation, the materials used and how it helps our agents in the field.

Secret Camera

By pushing down the blue button at the top of the pen, it will enable a small hidden camera that records footage of anything important. It benefits the agent by its size, 1mm in height and length, as it looks as though it isn't even there. Another advantage is that it immediately turns off, whilst still saving the remaining footage, when it isn't in the hands of its owner which is great if the enemy has caught a hold of it.

Encrypted Envelope

Once the agent pushes down another colour of the pen (Yellow), it immediately records conversations and then encrypts it into a code that can only be decoded by special forces -with the correct tools. A benefit to this includes, if there's a discreet lab nearby and a suspicious conversation is going on in there, it will make the quality optimal so that the agent will be able to hear it clearly making it easier to understand what is being said.

Ultra Mini-Gun

If the agent pushes down a green coloured button, it will enable a mini-gun (AK-47 to be exact) which pops out of the tip of the pen. Its very precise and deals a lot of damage which is great for assassinations. This benefits the agent by being a distraction or when they're trying to eliminate someone. In addition to this, this device will immediately reload which assists the agent when they're in a covert mission.

In conclusion to this, The Serpents Pen is the perfect device for any agent. It looks like an ordinary everyday object but hidden within it, it has a voice recorder, a video camera and a mini gun. This marvellous design means that the agent can take notes whilst retrieving any vital information without anyone noticing anything.

Glossary:

- Espionage: This means spying on other countries or people.

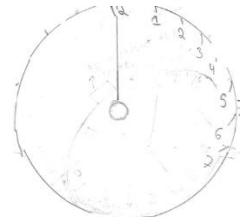

- Optimal: Best or most favourable; optimum
- Undetected: Unseen and stealthy

NR

The MI6 repulse watch

Introduction

After over 80,000 reports of bank robberies and over 2.6% of museums being robbed around the world this top-secret gadget was forged. This gadget was constructed by a Russian military Sargent in London in an espionage facility (underneath Stonehenge). This gadget is made for elite agents who are carrying out highly dangerous operations. This is made by THE MOST indestructible meteor and is now shaped into a slick watch. Overall, this report explores: functionality and strategic value for covert operations.

The smoke of truth

With just one click of a button, a misty cloud of hypnotising gas appears and starts to pour out from the watch and fills the room within seconds. This feature makes your diplomatic intimidating missions much easier and makes enemies leak out the vital truth.

The shot of doom

With help of an AI software with just a few words can do anything. This revolutionary feature can shoot out a mini tranquiliser dart that blasts out the watch with a whopping 50-meter range. If enemies are on the run this this feature is perfect.

Track – o meter

With just a small light tap on the screen, a holographic map appears -with a gps tracker on it and helps locate where any discrete, hidden evil layers may be and to track enemies down from anywhere at any time.

Conclusion

To sum up, the MI6 repulser watch is more than just a time teller. It includes: a smoke bomb which makes your enemies leak out the truth within seconds and a holographic map with a gps tracker on it and you can't forget the shot of doom which is a tranquiliser dart. Its slick design allows agents to be undetected and to look cool.

Glossary:

Discrete = to be careful in what you say or do

Espionage = spying on people or countries.

Forged = something that is made.

Intimidate = to forcefully make someone leak out the truth.

Undetected = to be unrecognisable and to be not seen.

The Super Glove 4000

Introduction

In the world of espionage, the need for high tech gadgets is ever increasing. The Super Glove 4000 has been engineered in Berlin [Germany] by agent Zakariyah Muhammad. The Super Glove 4000 has many special abilities such as: a laser beam, a smoke bomb and a grapple hook. This report explores: the construction, functionality and strategic value of this device in supporting agents on covert operations.

Grapple Hook

By pressing a button or using its voice activation mode, agents can activate the grapple hook and can easily escape dangerous situations. This dual mode help MI6 agents escape from any harm and break into secret bunkers. Such a feature is invaluable during undercover operations which are paramount [something that must happen] to help agents gather surveillance.

Distraction bomb

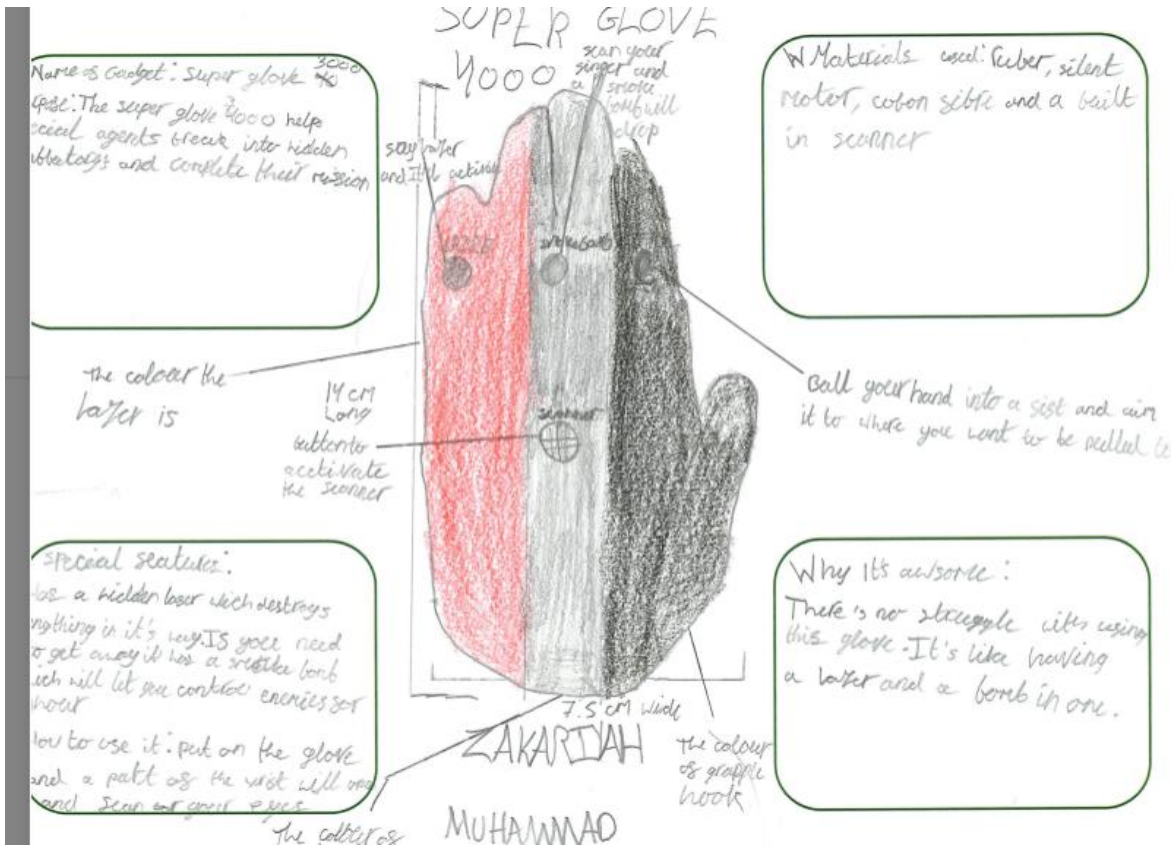

By blinking 3 times, agents worries disappear. A smoke bomb will be released from this device and explodes into a toxic gas. This toxic gas allows agents to control enemies for 1 hour. Agents can use this to create a distraction. This distraction can allow agents to spy on other organizations whiles targets are distracted. In addition to this, agents use the smoke bomb to stay undetected.

Laser beam

Through it voice activation, the laser beam can easily be activated to support missions. This laser beam can reach up to 5 metres and can cut through 5 layers of plastic, brick and metal. This valuable feature can help MI6 special agents during undercover operations and stakeouts.

Conclusion

To sum up, the Super Glove 4000 is a perfect tool for MI6 agents. The Super Glove 4000 includes: a grapple hook, a smoke bomb and a laser beam. It allows agents to stay safe during missions. Its clever design makes it impossible for targets to suspects it real purpose.

The Contacts 2.0

Introduction

In a world of crime and murder it is imperative that we stay one step ahead of the target; to enable this agent must have cutting – edge technology. A range of advanced gadgets have been developed by a team of engineers at the Star Plus research centre in Dubai. The Contacts 2.0 was created by a top scientist / engineer called Dr Aiyla Mcallister. The contacts have been designed for agents and secret operatives around the world to support on covert operations, stakeouts and diplomatic missions. They have been carefully designed to mimic normal contact lenses, so users remain undetected. This report explores the functionality and structure of the Contacts 2.0 and the benefit to agents.

The face tracker mode

By blinking four times the user activates the facial recognition mode which can instantly see the background and criminal record of each person and can match pictures of eyes, ears and fingerprints to anyone. This feature enables agents to confirm the details of the suspect they are on the hunt for while remaining undetected.

The surveillance mode

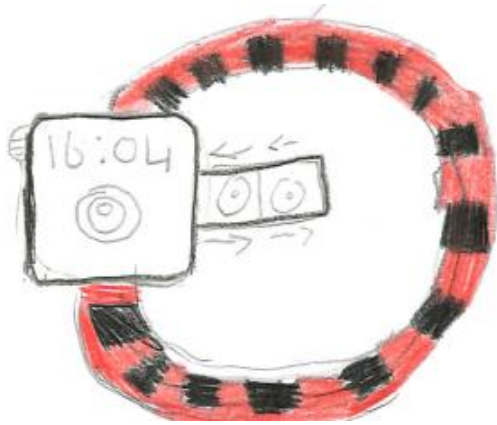

By pressing a small blue button on the side of the smartwatch agents can activate the camera and video feature. This feature enables agent to take 4K photos and videos. To do this (take photos), you must blink or keep your eyes open (to record videos). This feature will provide vital surveillance to support operative in the field.

The night vision mode

To activate the night vision mode, you must keep your eyes closed for five seconds or the night vision mode will automatically turn on when there is no light to be seen. The benefit of this feature is to enable agents to see in the dark.

Conclusion

In conclusion, the Contacts 2.0 is the perfect tool for secret agents / spys carrying out on diplomatic missions. At first, they seem like normal contact lenses but when worn they will give you access to night vision, facial recognition and the camera feature. This clever gadget enables agents to spy on their enemies while remaining undetected.

Glossary

Word	Meaning
Espionage	The practice of spying or of using spies, typically by governments to obtain political and military information
Paramount	More important than anything else
Discretion	The quality of behaving or speaking in such a way as to avoid causing offence or revealing confidential information
Surveillance	Close observation, especially of a suspected spy or criminal
Covert	Not openly acknowledged or displayed
